MAXXIMUM PERFORMANCE.  
PREMIUM VALUE.

**SP SPORT MAXX 050+**

Dunlop introduces its brand new sports tyre SP SPORT MAXX 050+. The tyre is designed for excellent performance on dry & wet roads and stability at high speeds. It's a premium tyre that brings you a superior riding comfort and is ideal for high performance Cars & CUVs.

Get it today and enjoy your ride.

## Product Information

### Concept

- Premium tyre from Dunlop **for high performance Cars & CUVs**
- Successor of MAXX TT & **flagship product of Dunlop**
- Ultra-high performance tyre for both **Dry & Wet conditions** with superior **riding comfort**

### Features

- High speed stability** and excellent **cornering performance**
- New pattern design** and compound improves performance on Dry & Wet road surfaces
- Superior **riding comfort**

## Pattern Design

*The asymmetric design of MAXX 050+ gives excellent performance on Dry & Wet surfaces.*

### Inside - WET

Efficient water drainage system for maximum safety

### Outside - DRY

Maximum control, grip & steering response

## Dry Performance

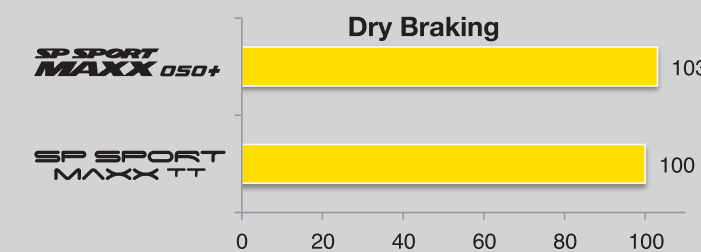

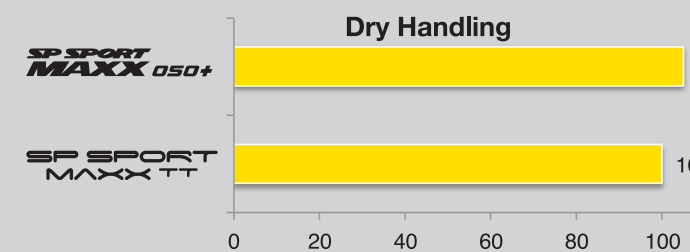

#### High grip shoulder blocks

Lateral & longitudinal high stiffness blocks for optimum road contact, providing high braking force and maximum cornering grip.

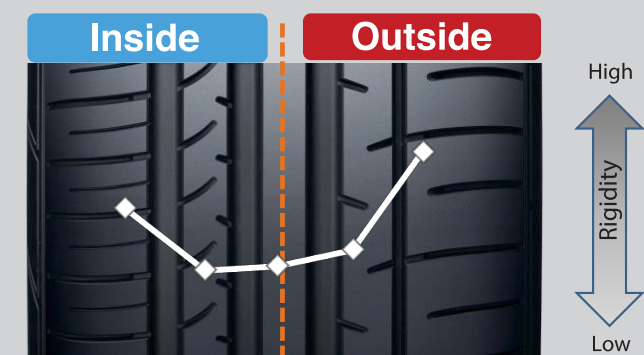

#### Centered straight rib

Maximum riding control with high speed straight line stability. Reactive to any steering input for sporty handling and maneuvering.

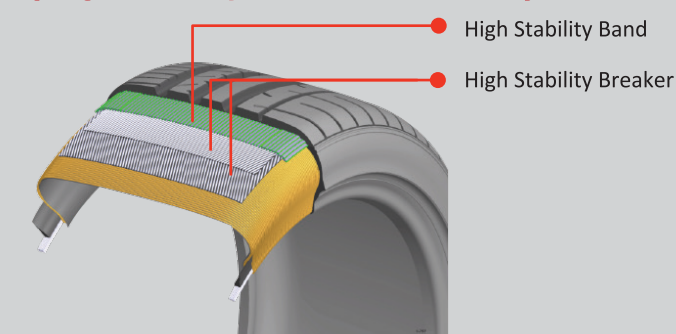

## High Speed Stability

{ New pattern optimizes block stability }

{ High stability breaker and band }

- Wide & solid outer shoulder block
- High stiffness blocks for optimum road contact
- Maximizes cornering performance

To achieve high speed driving performance, a high rigidity new tyre construction using more than two nylon reinforced layers is adopted to minimize tread profile expansion.

- Control tread profile at high speed
- Secure contact patch at high speed
- Realize high speed stability

## Wet Performance

#### Wide water evacuation grooves

Efficient water drainage through natural water flow direction. Optimized groove distribution for a more balanced contact pressure. Resistance to hydroplaning with maximum stability and control in the wet.

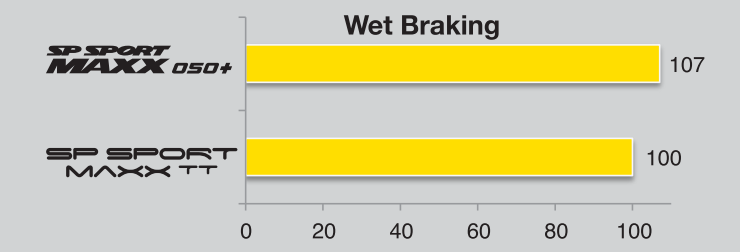

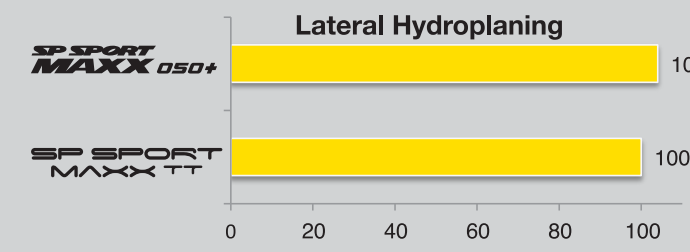

#### Enhanced Compound

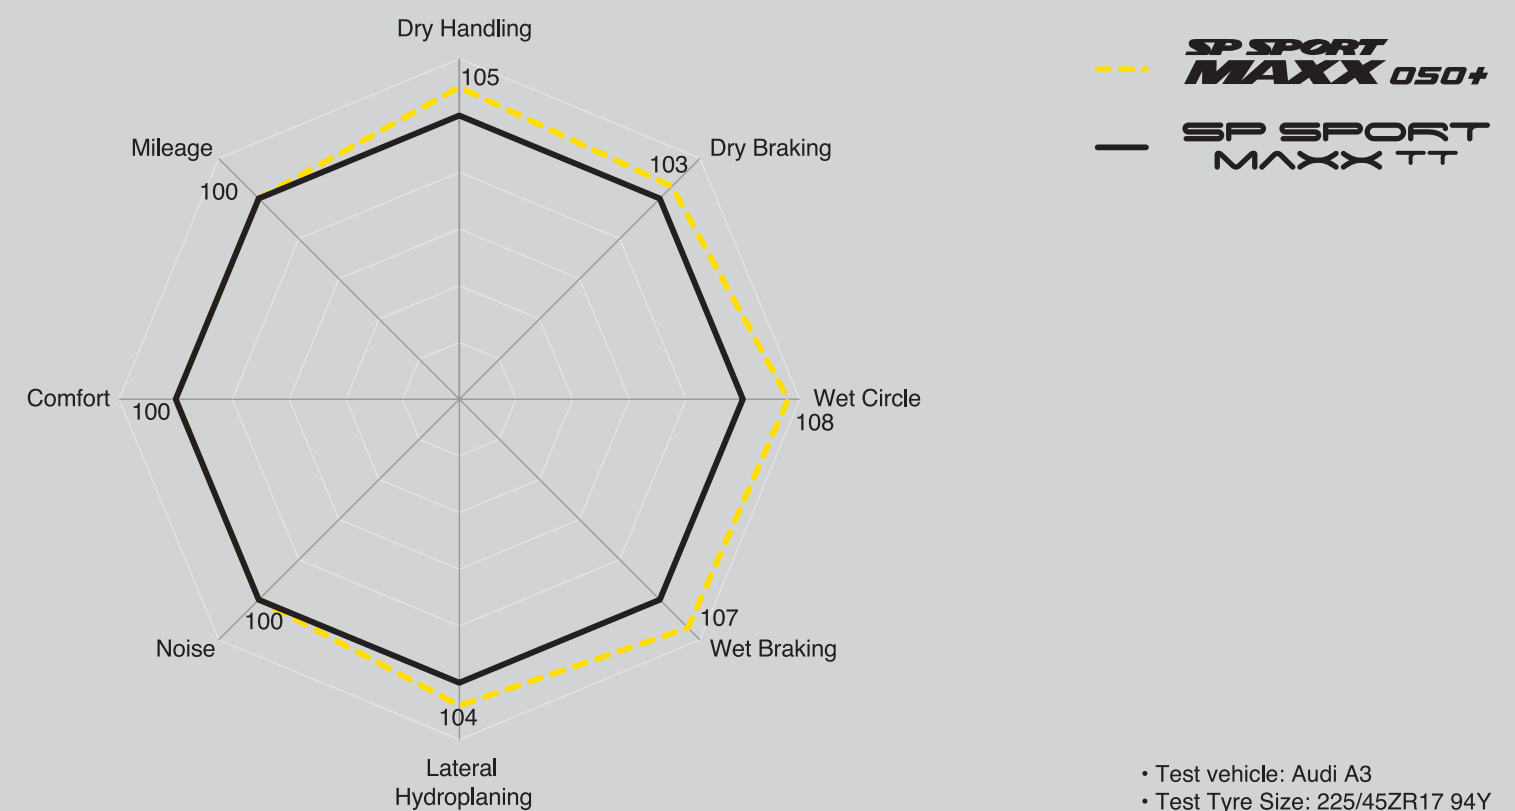

#### New compound improves wet grip

Optimized silica content using 4D Nano-design. Improve adhesion to road surface by high silica compound thereby improving wet performance.

## Performance Comparison

• Test vehicle: Audi A3  
• Test Tyre Size: 225/45ZR17 94Y
